

Empathy Map Canvas

Phase 1: Brainstorming and Ideation Phase

shopEZ E-commerce Marketplace | MERN Stack | June 2026

1. Empathy Map Canvas - The Convenience-Seeking Shopper

This empathy map captures the emotional and behavioral dimensions of our primary customer persona to guide design decisions.

Empathy Map - Convenience-Seeking Shopper

THINKS and FEELS

- "Is my billing address and card information fully secure?"
- "I hope my shopping cart remains saved even if I switch devices."
- Relieved when site shows active stock alerts and free shipping triggers.
- Frustrated when checkout steps feel long and confusing.
- Anxious about order delivery timelines after placing orders.

HEARS

- Friends: "I only buy from stores that deliver in under 3-5 days."
- Online forums: "Read customer reviews before placing orders."
- Ads promoting faster, cheaper shipping alternatives.
- Social media influencers recommending product categories.

SEES • Modern, minimal layouts on platforms like Amazon or ASOS. • Confusing checkouts on smaller retail sites with hidden fees. • Product comparison grids and "best seller" badges. • Review star ratings prominently displayed on listings.	SAYS and DOES • Says: "I will add this to my wishlist and decide later." • Says: "I can't find a way to filter shirts by price." • Does: Abandons checkout if more than 3 forms appear. • Does: Compares product reviews before committing to purchase. • Does: Returns to cart multiple times before buying.
PAIN POINTS • Slow-loading image assets causing impatience. • Login sessions expiring, wiping out active carts. • Hidden fees revealed only at the final payment step. • No clear stock availability indicators on product pages. • Complex address entry forms at checkout.	GAINS EXPECTED • Immediate autocomplete suggestions on searches. • Instant checkout total with price breakdown (coupon, shipping, tax). • Persistent cart surviving browser refreshes. • Verified buyer badges building review trust. • 6-step visual fulfillment tracker after placing orders.

2. Empathy Map Canvas - The Efficiency-Focused Admin/Seller

Empathy Map - Operations and Control Manager

THINKS and FEELS • "I need to know which products are running low to reorder stock." • "I want an easy way to upload product images and create discount codes." • Anxious when a product is out of stock but still listed for sale. • Satisfied when sales metrics are trending upward in clear visual graphs.	HEARS • Customers asking: "Where is my order? Is it shipped yet?" • System alerts: "Warning: Product X is out of stock!" • Team feedback that inventory tables are hard to update manually. • Reports of delayed fulfillments causing negative customer reviews.
SEES • Sales trends and category distribution graphs. • Inventory tables showing items, prices, and stock numbers. • Order queues requiring manual status updates. • Customer feedback scores and review ratings.	SAYS and DOES • Says: "I need to update this product description immediately." • Says: "Let me check monthly revenue to see if this code worked." • Does: Manually shifts order statuses from Processing to Shipped. • Does: Creates coupon codes for flash sales regularly.
PAIN POINTS • Clunky dashboards requiring multiple steps to add items. • Slow inventory updates leading to oversells. • No real-time notification system for low-stock events. • Separate tools for product management, analytics, and customer control.	GAINS EXPECTED • Single dashboard with sales graphs, stock alarms, and user tables. • Direct image upload via Multer for product photos. • Instant coupon management (create, activate, deactivate, delete). • One-click order delivery milestone progression controls.
