

Phase 5: User Acceptance Testing (UAT)

This document contains the functional verification test scenarios conducted on the **shopEZ** platform to confirm that all operations comply with system requirements and product user stories.

User Acceptance Testing (UAT) Ledger

Test Case ID	Feature Scope	Steps to Execute	Expected Verification Result	Actual Outcome	Status
UAT-001	User Registration	1. Navigate to Registration page. 2. Fill in valid Name, email address, and password. 3. Submit the registration form.	System creates a new profile in MongoDB, hashes the password, signs a session cookie, and loads the Home dashboard.	Profile added to MongoDB with Bcrypt hashed password; page loads user session immediately.	Pass
UAT-002	User Login & RBAC	1. Navigate to Sign In page. 2. Input registered user credentials. 3. Submit the credentials. 4. Attempt to access <code>/admin</code> panel route directly.	Server grants signed JWT token stored in cookie. The user profile loads. DIRECT navigation to <code>/admin</code> must block and redirect standard users to homepage.	Credentials verified; JWT cookie set successfully; direct access to admin URL blocks standard customers.	Pass

UAT-003	Product Search & Filter	1. Navigate to Catalog search. 2. Type query "Shirt". 3. Toggle price slider under "\$50". 4. Select rating filter "4 Stars & Up".	Store catalog displays autocomplete suggestions. The search outputs matching items restricted under the \$50 range holding ratings ≥ 4 stars.	Live suggestions filter items correctly. Price range and ratings sort listings instantly.	Pass
UAT-004	Cart Persistence & Wishlist Move	1. Open Product details page. 2. Click "Add to Cart" and select quantity. 3. Go to Wishlist page. 4. Click "Move to Cart" for a favorited item. 5. Reload the browser page.	Cart counter increments on the navigation bar. Cart total updates. The wishlist item transfers to cart, clearing from wishlist. Reloading preserves the cart items.	Cart state is saved to React state context, synced to localStorage. Wishlist move transfers the item and clears favorite.	Pass
UAT-005	Checkout, Coupons & Stripe Payment	1. Click Checkout button in Cart. 2. Pick a saved address. 3. Input active promotional coupon code. 4. Pick standard/express shipping speed. 5. Fill mock credit card inputs. 6. Click "Place Order".	Coupon applies corresponding discount. System calculates taxes (15% VAT) and shipping fees. Client sends intent request. Order details save, product stock decreases, and receipt renders.	Discounts compile. Intent returns secret. Product stocks decrement automatically in database. Order confirmation page loads.	Pass

UAT-006	Admin Catalog CRUD	1. Log in as an Administrator. 2. Access Admin Dashboard panel. 3. Select Products catalog menu. 4. Click "Create Product" and fill details. 5. Select local image file to upload.	Image file is sent to Cloudinary API, returning CDN link. Form submit inserts product. Item displays instantly in public store catalog.	Image uploads to Cloudinary; new product is saved to MongoDB and displays on public pages.	Pass
UAT-007	Admin Status Overrides	1. Log in as an Administrator. 2. Open Orders database panel list. 3. Change shipping status of a customer order to "Shipped". 4. Log back in as standard customer. 5. Review order receipt list page.	Admin dashboard updates state. Visual timeline tracker on the customer order receipt page updates stepper track from "Placed" to "Shipped".	Stepper track advances color. Database updates the order tracking timeline array dynamically.	Pass
UAT-008	Customer Product Reviews	1. Log in as verified buyer. 2. Open product detail page. 3. Rate 5 stars and submit review text. 4. Attempt to write a second review. 5. Click "Helpful" upvote icon on another review.	System accepts rating, marks badge as "Verified Purchase", and recalculates average rating. Block subsequent review submissions. Upvote counter increments by 1.	System reviews database checks. Average score recalculates. Second submission fails validation check. Upvote tally increments.	Pass

UAT-009	Admin Customer Controls	1. Log in as an Administrator. 2. Open Customer accounts manager panel. 3. Locate target user and toggle to "Blocked". 4. In a separate tab, attempt to log in using that blocked user account.	Account status updates to active=false. User is barred from logging in; system displays "Your account is deactivated" warning toast.	User is blocked. Login endpoint rejects request and throws error.	Pass
