

Empathy Map Canvas

Brainstorming & Ideation Phase

shopEZ E-commerce Marketplace | MERN Stack | June 2026

1. Empathy Map Canvas - The Convenience-Seeking Shopper

This empathy map captures the emotional and behavioral dimensions of our primary customer persona to guide design decisions.

Empathy Map - Convenience-Seeking Shopper

THINKS and FEELS

- "Is my billing address and card information secure?"
- "I hope my shopping cart remains saved even if I switch devices."
- Relieved when site shows active stock alerts and free shipping triggers.
- Frustrated when checkout steps feel long and confusing.

HEARS

- Friends: "I only buy from stores that deliver in under 3-5 days."
- Online forums: "Read customer reviews before placing orders."
- Social media recommendations for products.

SEES • Modern, minimal layouts on platforms like Amazon or ASOS. • Confusing checkouts on smaller retail sites with hidden fees. • Product comparison grids and review ratings.	SAYS and DOES • Says: "I will add this to my wishlist and decide later." • Says: "I can't find a way to filter shirts by price." • Does: Abandons checkout if more than 3 forms appear.
PAIN POINTS • Slow-loading image assets causing impatience. • Login sessions expiring, wiping out active carts. • Hidden fees revealed only at the final payment step.	GAINS EXPECTED • Immediate autocomplete suggestions on searches. • Instant checkout total with price breakdown. • Persistent cart surviving browser refreshes.

2. Empathy Map Canvas - The Efficiency-Focused Admin/Seller

Empathy Map - Operations and Control Manager	
THINKS and FEELS • "I need to know which products are running low to reorder stock." • "I want an easy way to upload product images and create discount codes." • Satisfied when sales metrics are trending upward in clear visual graphs.	HEARS • Customers asking: "Where is my order? Is it shipped yet?" • System alerts: "Warning: Product X is out of stock!"
SEES • Sales trends and category distribution graphs. • Inventory tables showing items, prices, and stock numbers.	SAYS and DOES • Says: "I need to update this product description immediately." • Does: Manually shifts order statuses from Processing to Shipped.

PAIN POINTS

- Clunky dashboards requiring multiple steps to add items.
- Slow inventory updates leading to oversells.

GAINS EXPECTED

- Single dashboard with sales graphs, stock alarms, and user tables.
- Direct image upload via Multer for product photos.
