

User Acceptance Testing (UAT) FSD

Phase 5: Project Development and Testing

shopEZ E-commerce Marketplace | MERN Stack | June 2026

1. UAT Overview

This document contains the functional verification test scenarios conducted on the shopEZ platform to confirm that all operations comply with system requirements and product user stories. All test cases were executed on the development environment running Node.js 18.x + MongoDB local instance.

2. User Acceptance Testing Ledger

Test ID	Feature Scope	Steps to Execute	Expected Result	Actual Outcome	Status
UAT-001	User Registration	1. Navigate to Registration page. 2. Fill in Name, email, and password. 3. Submit.	System creates a profile in MongoDB, hashes password, signs session cookie, and loads dashboard.	Profile added to MongoDB with Bcrypt hashed password; user session loads immediately.	PASS

UAT-002	User Login and RBAC	1. Navigate to Sign In page. 2. Input credentials. 3. Submit. 4. Access /admin directly as user.	Server grants JWT token. User profile loads. Direct navigation to /admin blocks and redirects standard users to homepage.	Credentials verified; JWT cookie set; direct admin URL access blocked for standard customers.	PASS
UAT-003	Product Search and Filter	1. Navigate to Catalog search. 2. Type query "Shirt". 3. Toggle price slider under \$50. 4. Select rating filter 4 Stars and Up.	Catalog displays autocomplete suggestions. Search outputs matching items under \$50 with ratings ≥ 4 stars.	Live suggestions filter correctly. Price range and rating sort listings instantly.	PASS
UAT-004	Cart Persistence and Wishlist Move	1. Open Product detail page. 2. Click Add to Cart. 3. Go to Wishlist page. 4. Click Move to Cart for a favorited item. 5. Reload browser page.	Cart counter increments on nav bar. Wishlist item transfers to cart and clears from wishlist. Reloading preserves cart items.	Cart state saved to React context, synced to localStorage. Wishlist move transfers item correctly.	PASS

UAT-005	Checkout, Coupons and Stripe Payment	1. Click Checkout in Cart. 2. Pick a saved address. 3. Input active coupon code. 4. Pick shipping speed. 5. Fill mock card inputs. 6. Click Place Order.	Coupon applies discount. Taxes (15% VAT) and shipping fees calculated. Client sends intent request. Order saves and product stock decrements. Receipt renders.	Discounts compile. Intent returns client_secret. Stocks decrement in database. Order confirmation loads.	PASS
UAT-006	Admin Catalog CRUD	1. Log in as Admin. 2. Access Admin Dashboard. 3. Click Create Product and fill details. 4. Select local image file to upload.	Image file sent via Multer to /uploads, served as static file. Form submits and inserts product. Item displays in public store catalog.	Image uploads to /backend/uploads; new product saved to MongoDB and displays on public pages.	PASS
UAT-007	Admin Order Status Overrides	1. Log in as Admin. 2. Open Orders list panel. 3. Change status to "Shipped" for a customer order. 4. Log in as customer. 5. Review order receipt page.	Admin dashboard updates state. Visual timeline on customer receipt updates stepper from Placed to Shipped.	Stepper track advances color. Database updates order tracking timeline array dynamically.	PASS

UAT-008	Customer Product Reviews	1. Log in as verified buyer. 2. Open product detail page. 3. Rate 5 stars and submit review text. 4. Attempt to write a second review. 5. Click Helpful upvote on another review.	System accepts rating, marks badge as Verified Purchase, recalculates average. Block subsequent review submissions. Upvote counter increments by 1.	Database checks verify purchase. Average score recalculates. Second submission fails validation. Upvote tally increments.	PASS
UAT-009	Admin Customer Account Controls	1. Log in as Admin. 2. Open Customer accounts panel. 3. Locate target user and toggle to Blocked. 4. In a separate tab, attempt to log in as that blocked user.	Account status updates to active=false. User is barred from logging in. System displays "Your account is deactivated" warning toast.	User is blocked. Login endpoint rejects request and throws error. Toast notification displays correctly.	PASS

3. UAT Summary

Metric	Value
Total Test Cases	9
Passed	9
Failed	0

Pass Rate	100%
Test Environment	Node.js 18.x, MongoDB local, React 19.x

Conclusion: All 9 User Acceptance Test cases have been verified and passed successfully. The shopEZ platform meets all functional requirements specified in the Requirement Analysis phase.
